

**KEY HIGHLIGHTS**

netForensics helps you protect your data and maintain compliance, delivering actionable security intelligence to companies worldwide through:

- Security information and event management
- Log management and threat visibility
- Compliance automation and audit readiness
- Solutions for managed security providers

Partnering to Protect Your Enterprise

For over a decade, Cisco and netForensics have been helping secure businesses around the globe. netForensics products seamlessly integrate with Cisco security and networking products, as well as a broad array of multi-vendor technologies—delivering true end-to-end threat management. Working with Cisco, we provide organizations with best-in-class solutions that enable real-time security visibility, rapid threat response, and compliance with complex regulatory mandates.

When you deploy netForensics solutions in a Cisco network environment, you get an unmatched level of visibility through the in-depth analysis of security events. Through rules-based correlation techniques, nFX Cinxi One can identify security events that go undetected or are lost in the large volume of data generated by various security devices. nFX Cinxi One collects event data from a wide range of Cisco network and security devices such as routers, firewalls, and IDS systems. Data from these devices is automatically correlated based on definable rule sets. The nFX solution uncovers similar attacks against different devices or device types. It also identifies individual events that alone are harmless, but when combined with other actions in succession suggest an attempted attack.

nFX Cinxi One compiles this information and present it to you through a series of dashboards, views, and historical reports. With netForensics security information and event management (SIEM) and log management solutions, Cisco customers can depend on accurate, comprehensive security information using a single, unified view across all network systems, security devices, and applications. With critical

visibility, you can understand the complete profile of an attack, open a case to resolve the vulnerability, and track the results of the remediation actions to confirm the issue is resolved. The integration of netForensics SIEM products and Cisco technologies makes the task of identifying uncommon, subtle, and related events among vast amounts of data finally achievable.

Rest assured that nFX Cinxi One is Cisco compatible ensuring that Cisco devices have been verified and tested.

Cisco products that nFX Cinxi One supports:

ASA 5510	CSA
IPS 4240	CSA Management Center
Ironport S-Series Appliance	CatOS
CS-MARS	Firewall Service Module
Email Security Appliance	IDS
ASR	IOS
Access Control Server	PIX
	VPN

nFX Cinxi One 4.1 has tested compatible with Cisco ASA 8.2, Cisco IPS 7.0, Cisco IOS 15.0 (M) 1, Cisco ESA 7.0, Cisco WSA 6.3 and CS-MARS 6.0.5. The Cisco Compatible logo signifies that netForensics' product has undergone interoperability testing by netForensics together with Cisco and a third-party test house based on testing criteria set by Cisco. netForensics is solely responsible for the support and warranty of its product. Cisco makes no warranties, express or implied, with respect to netForensics' product or its interoperation with the listed Cisco product(s) and disclaims any implied warranties of merchantability, fitness for a particular use, or against infringement.

netForensics:

A New Level of Security Intelligence

The nFX One family of appliance products offer advanced solutions for real-time monitoring, event correlation, threat management, and reporting. These solutions help organizations of all types and sizes meet today's most demanding data protection and compliance challenges. With netForensics, you can protect your critical data, manage log overload, and ensure audit readiness—regardless of your budget, size, and performance requirements.

nFX One solutions collect, centralize, and store volumes of diverse data, and deliver understandable, actionable security intelligence. You can easily see the most important security information and not lose visibility due to overwhelming volumes of diverse event data. This prioritized insight dramatically improves your ability to identify and rapidly respond to the true threats, and stop them in their tracks before real damage occurs.

Achieving and Maintaining Compliance

Based on industry best practices and years of security compliance management leadership, netForensics solutions can help you meet your compliance obligations and in the process, ensure that you maintain the highest level of security intelligence. netForensics helps you meet today's and tomorrow's security, compliance, and business needs with a proven, comprehensive approach to security—and one that will fit into your budget.

You can implement log management as a baseline solution, and add security information management (SIM) that includes the necessary real-time threat identification, prioritization, and remediation capabilities. And you can do it easily, seamlessly, and for a fraction of the cost of other solutions—with the nFX Cinxi One family of appliances.

nFX Cinxi One:

Log Management and SIM in One Appliance

nFX Cinxi One appliances offer a low-cost, easy-to-use solution for managing the vast amount of security-related data that inundates your organization every day. Cinxi combines log management, real-time event correlation and alerting, remediation, and reporting in a single high-performance solution. It simplifies the time-consuming task of monitoring and managing the compliance and security risks that can affect your business operations.

The Cinxi line of appliances offers the most cost-effective yet advanced SIEM solutions available on the market today. Cinxi offers the fastest events per second (EPS) performance, greatest flexibility, most available live data storage, and the lowest total cost of ownership—thanks to netForensics' simple pricing models and the low overhead required to install and maintain the platform.

nFX Cinxi One ensures users are able to:

- log needed events to ensure compliance
- report on compliance events within the interface and with reports
- normalize events from different data sources into a common model
- correlate raw events into meaningful data
- notify via email or text message defined by the administrator
- support custom logs to ensure that even proprietary solutions are supported
- allow multiple tasks to be performed in parallel in the user interface
- create custom queries so that the user can tailor the solution for the organizational needs

netForensics – Delivering Actionable Security Intelligence Worldwide

Recognized as the pioneer of SIM, netForensics delivers reliable, innovative products that security and business managers stake their careers on every day. From the largest government agencies and companies running complex networks, to small and midsize businesses, customers across the globe rely on netForensics for cost-effective SIM solutions. netForensics helps companies in every industry see and eliminate threats, secure valuable assets, and successfully take on compliance challenges.
